Response to Arguments

Applicant's arguments filed November 8, 2004, with respect to the rejection of claims 1-21 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Farjh et al. and Elms.

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Response to Amendment

The declaration filed on November 8, 2004 under 37 CFR 1.131 is sufficient to overcome the Johnson et al. reference.

Drawings

Replacement drawings were received on November 8, 2004. These drawings are approved.

Claim Objections

Claims 5 and 9-10 are objected to because in claim 5, fifth line from last, "comprise" should be removed. Appropriate correction is required.

Claim 14 is objected to because it appears to be dependent on claim 12 (note: "the latter time slot block" lacks antecedent basis).

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1, 5, 9-11 and 15-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Farjh et al (US 5,341,401) in view of Elms (US 5,384,782).

1. Regarding claim 1, 5, 9-11 and 15-16, Farjh discloses a method for identifying a logical channel in a radio frame part (fig. 1) by channel decoding the information by means of channel decoding relating to different logical channels (fig. 7, step 1 and step 5). The method comprises arranging selected channel decoding methods in the order in which they will be applied (fig. 7, step 1 and step 5), channel decoding the information until the channel decoding succeeds (fig. 7, step 3-4) or all the channel decoding methods have been selected fig. 7, step 5 and 7-9), interpreting that the frame part includes the logical channel of the successful channel decoding method (fig. 7, steps 3-4; col. 5, line 64 though col. 6, line 4), and interpreting when any of the channel decoding methods fail, that the frame part includes information of a logical channel selected as a default value (fig. 7, step 7-8; note: decoding as FACCH when UCH decoding fails or is not as strong as FACCH decoding -- col. 4, lines 19-23).

2. However, Farjh does not disclose that the channel decoding is selected based on a logical channel indicator. Elms discloses selecting channel decoding based on a logical channel indicator (col. 5, lines 46-48) where the method is implemented in a receiver of a base station or

subscriber terminal (col. 1, lines 31-38). Therefore, it would have been obvious to one skilled in the art at the time the invention was made to initiate a FACCH decode if a FACCH steal flag is detected in the invention of Farjh in order to perform decoding which is most likely to be successful (col. 3, line 65 through col. 4, line 2).

Allowable Subject Matter

Claims 2-4, 6-8, 12-13 and 17-21 are allowed.

Claim 14 would be allowable if the above claim objection is corrected.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Takaki (US 5,638,408) discloses multiple Viterbi decoders to determine the proper rate of a transmitted signal (fig. 2).
